You still technically need Java, but it is now downloaded by the Minecraft launcher and stored with the launcher instead of installed across the entire system.. We've written extensively about Java and the problems with the platform over the years; if you need a solid primer on why exactly Java is such a problem we'd strongly suggest reading over Java Is Awful and Insecure, It's Time to Disable It, Here's How.. Because of this, millions of people around the world who love Minecraft also have to love-hate Java and keep it installed on their system in order to play the game.. Update: Microsoft has just released a new launcher for OS X users as well, so we're updating the article.. This new Minecraft development changes the game, however, so that we no longer need a full system-wide Java installation to play the game.. The really great thing is that Minecraft should actually run faster in our testing if you use their version instead of the version you already have installed.. The short version is that Minecraft is now bundling a standalone version of Java into their installation and it doesn't have the security problems and annoyances that regular Java does.. The Java executable used by Minecraft stays with Minecraft and is as good as invisible and inaccessible to the rest of the system..
